6. Proposed System Description

6.1 Objective

The purpose of this proposal is to present the design, manufacturing, installation, commissioning, testing and acceptance testing of the complete automation system to handle Cartons as per specifications shared by Landmark.

6.2 Summary of the System

1. **Infeed:** Cartons will be manually loaded on four telescopic belt conveyors, Physical barrier are present to restrict oversize products, further, products is transferred to inclined belt conveyor that transport the products primary scanning and distribution zone.
2. **Primary Scanning & products segregation:** Cartons are now scanned through side barcode scanner & get diverted to different levels, products those contain different SKUs inside them & products with damaged or no barcodes will be diverted to manually processing zone.
3. **Manual processing Area:** Cartons diverted here, are manually opened & different SKUs are manually loaded on powered roller conveyor, now these products are scanned & diverted to respective levels.

4. **Floor wise products segregation:** Products of L+2 to L+5 level are transported & diverted with the help of upstream powered belt spiral conveyor. Whereas products of L & L+1 are transported through powered roller & Powered belt conveyors.

Phase 1 – Products are dropped at the starting point of mezzanine at respective levels.

Phase 2 – Products as transported through the length of the particular level & also diverted to respective Aisle through Pop up diverters.

5. **Outbound:** After the manual picking is complete, Cartons are carried to the other end of the mezzanine & loaded on Downstream Powered belt Spiral conveyor.

6.3 Main benefits of the proposed solution

The proposed solution has the following advantages:

1. High operational throughput
2. Maximized sorting capacity throughout at dispatch sorter to meet the requirement.
3. Low occupancy of floor space in the building
4. FALCON's system can adapt with changing business requirements by adjusting its speed to match the operational throughput requirement, thereby leading to Power Savings and reduced system Wear & Tear
